LEYV INSTITUTE CONFERENCE GATHERS LEADING ECONOMISTS, SOCIAL SCIENTISTS, AND OTHER ANALYSTS TO DISCUSS TIME USE AND ECONOMIC WELL-BEING

Two-Day Conference, October 28–29, Will Explore Measures of Household Well-Being, Valuing Unpaid Household Production, and Other Topics

ANNANDALE-ON-HUDSON, N.Y.—When policymakers and the media discuss economic well-being, the focus is often on economic growth, unemployment rates, wages, and other broad economic measures. Yet, for many everyday people, a key and often overlooked component of well-being is household production, especially when it comes to time use and the many unpaid hours that everyday people work preparing meals, cleaning, doing laundry, ironing, and performing other household chores. As policymakers consider economic well-being and inequality, it is vital that they examine the trends and disparities in household production.

On October 28–29, The Levy Economics Institute of Bard College hosts a conference, Time Use and Economic Well-Being, focusing on issues and topics related to time allocation and household production. The conference will gather leading economists, social scientists, and other analysts to discuss a range of topics, including an analysis of how working parents preserve time for their children, working-hour arrangements and income inequality, the impact of nonmarket production on earnings inequality, and comparisons of international differences in market work and household production. Speakers will also explore methods of incorporating the value of household production into national income accounts, problems associated with statistical methodology and data in dealing with the topics listed above, as well as difficulties of using theoretical perspectives and models with these topics.
