[wrayr@umkc.edu](mailto:wrayr@umkc.edu)

# No One Saw it Coming

- Two Falsehoods: Unforeseeable and Unpreventable; Black Swans with Fat Tails
- Reality: Financial Crisis Inquiry Report
  - A “Man”-made crisis: Captains of Finance & Public Stewards caused it and ignored warnings
- Reality: Many economists saw it coming
  - Godley; Baker; Minsky
- Reality: Everyone saw it coming
  - YBG-IBG: you’ll be gone, I’ll be gone
  - Goldman&Paulson
  - It was Wall Street’s ***desired*** outcome

# My Education

- Minsky/Kalecki/Levy Profits equation
  - $P=I+def+NX+Cp-Sw$
  - What if  $Sw < 0$
- Godley alternative: 3 sectors
  - If private sector runs deficit, govt sector can run surplus, given balanced current acct

# Wynne's Approach

- Alternative approach to Money: stock-flow consistent → no independent  $M_s$  and  $M_d$  functions
- Discipline analysis with stock-flow consistency
  - ◆ Minsky: discipline with balance sheets
- Behavioral equations and thus causation underlies analysis
- Repeated Simulations → progressively better understanding of what determines stability and how system responds to change

# It all started with Goldilocks

- 1996: US Federal Govt begins to run surpluses; continued for 2.5 years
- Clinton projects surpluses for next 15 years
- All Gov't debt will be retired

## What's News—

### World-Wide

BUDGET SURPLUSES MAY WIPE OUT the federal debt by 2015, Clinton boasted.

The president, announcing his budget forecast, said the government has the opportunity to cut taxes, add a prescription plan to Medicare and extend the life of the Social Security trust fund. Some Republicans said they were open to a compromise, but many remained skeptical. The White House said surpluses are now projected at \$16.3 billion for this fiscal year and \$117.3 billion for fiscal 2001. (Articles on Pages A3 and B1)

Some details emerged on Clinton's Medicare plan, due out today. A drug coverage benefits plan says prices of top prescription drugs surged recently.

Walter Ruddell agreed to a plea bargain with Whitewater prosecutor Starr that will spare the Clinton friend and ex-wife any additional prison time. Starr associates said it was unlikely Ruddell's cooperation would lead to charges against the Clintons, and the accord could constitute the final chapter of the Whitewater saga. (Article on Page A10)

Ethnic Albanian refugees returned to their homeland in the first organized U.N. repatriation convoy as Kosovo Liberation Army soldiers turned over areas to NATO. Serbian Orthodox leaders appealed for peacekeepers' protection as they marked the 13th Serb defeat by the Turks at Kosovo Polje. (Articles on Pages A15 and A16)

## Less Than Zero

Few Americans Heed Washington's Urging For Bigger Nest Eggs

Savings Rate Declines Again As Tax Breaks, Caveats Collide With Prosperity

Raiding 401(k) for a Dream

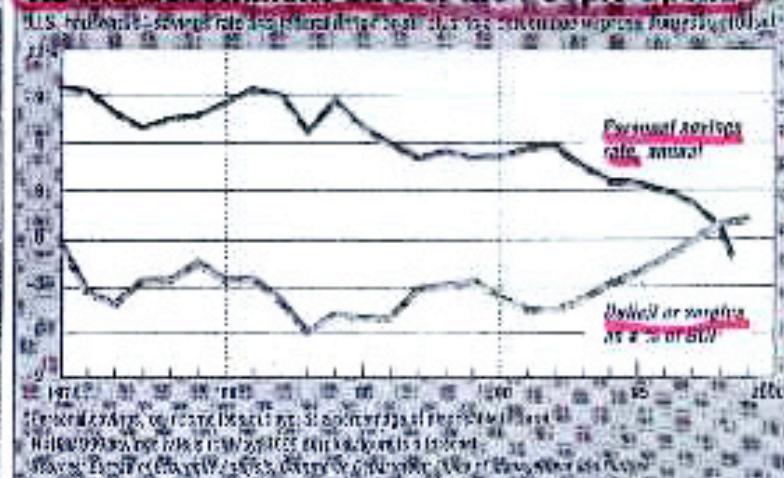

By Justin M. Soltész

Staff Reporter of The Wall Street Journal  
WASHINGTON For a quarter century, politicians have been tinkering with the tax code and otherwise creating incentives to encourage people to save. Yet Americans have only become more profligate.

In 1974, the year Congress created the Individual Retirement Account, Americans saved 9.5% of their paychecks. These days, Americans are spending everything they make, and then some. Yesterday, the Commerce Department said the official household savings rate in May fell to minus 1.2%, the lowest level since the Great Depression.

The almost universal response from Washington: Keep trying. President Clin-

### As the Government Saves, the People Spend

### Big Spenders

The Commerce Department said spend-

# **Goldilocks was Doomed**

- The Perfect Fiscal Storm
- Why? The Three Balances
- The Meaning of Zero:  
 $0 = \text{Private Bal} + \text{Govt Bal} + \text{Foreign Bal}$

# Sectoral Balances Approach

- Fundamental Principles:
  - A. For every surplus there must be an equal deficit
  - B. Flows accumulate to stocks
- Two sectors:

Govt Balance + Private Balance = 0

  - i. Govt Deficit = Private Surplus
  - ii. Govt Surplus = Private Deficit

# Sectoral Balances (Con't)

- Three sectors: Govt Balance+Domestic Private Balance+Foreign Balance=0
  - i. Govt Deficit = Private Surplus + Current Acct Def
  - ii. Govt Surplus = Private Def + Current Acct Surplus
  - etc

# Stock-Flow Consistency

Flows accumulate to stocks: Deficits → Debt  
Surpluses → Net Financial Wealth

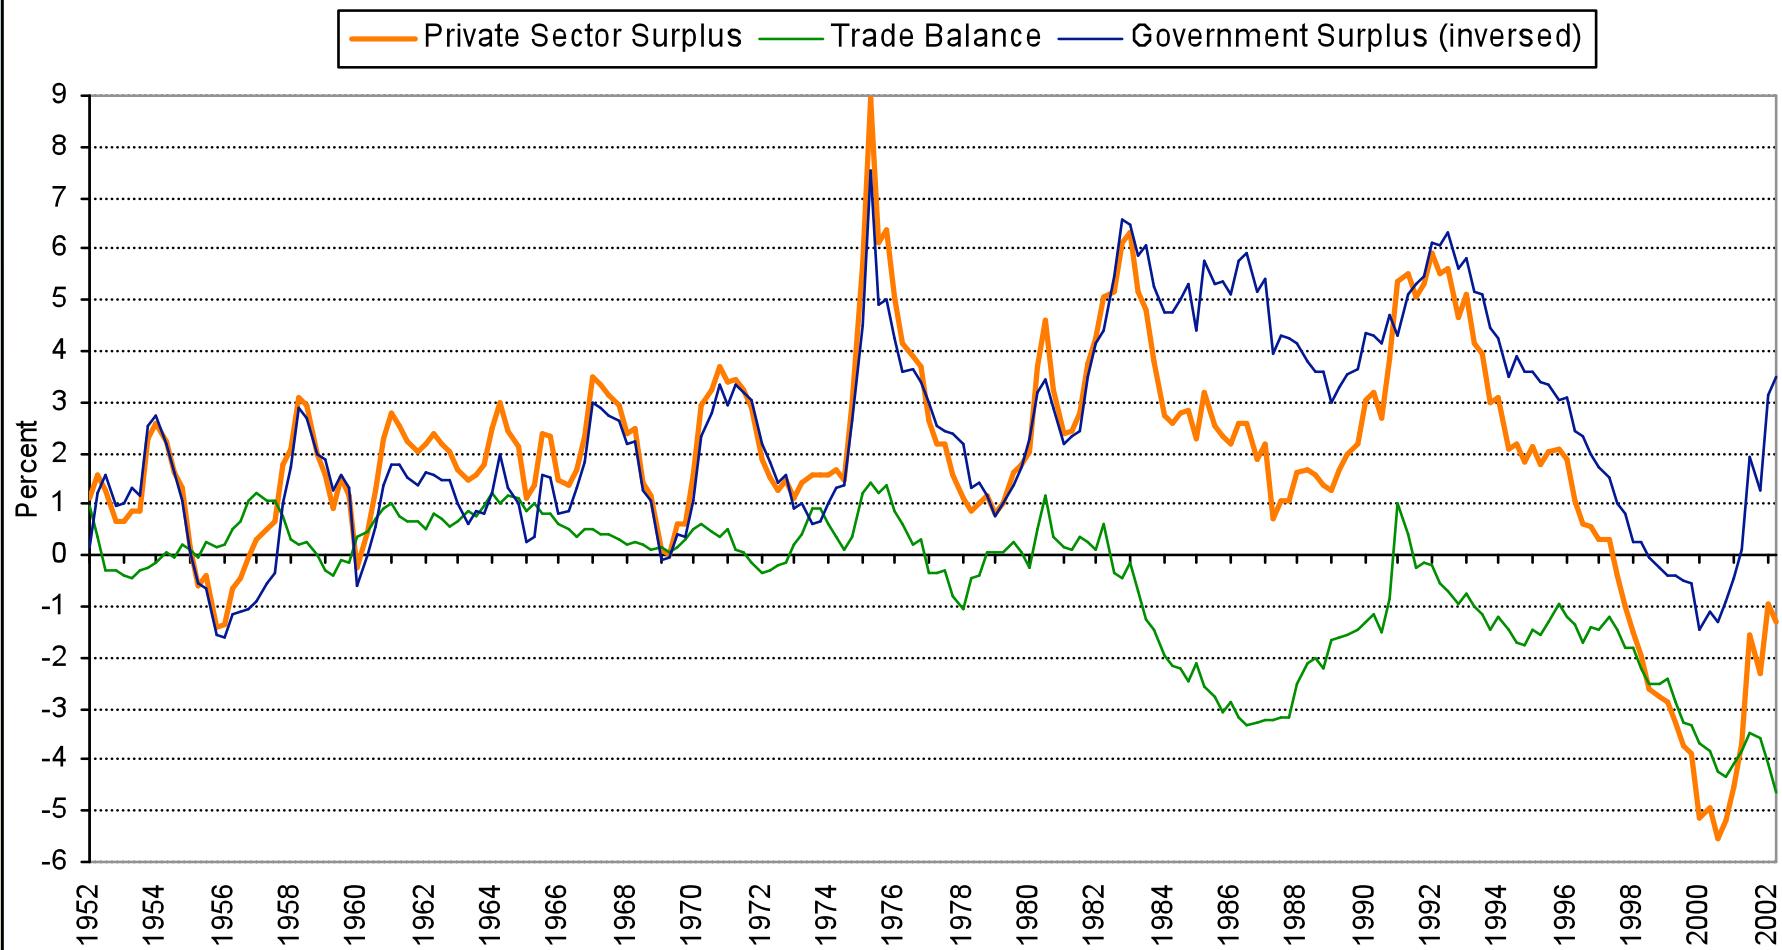

- A. Two Sectors: Govt Debt = Private Net Financial Wealth
  - Govt Def → Govt Debt = Private Net Financial Wealth
- B. Three Sectors: Govt Debt = Domestic Private NFW + Foreign NFW
  - i. Govt Def → Govt Debt = Domestic NFW + Foreign NFW (\$)

(NB: domestic private and foreign sectors can accumulate other nongovt assets, depending on balance position; ie foreign can accumulate private domestic debt if current acct is negative)

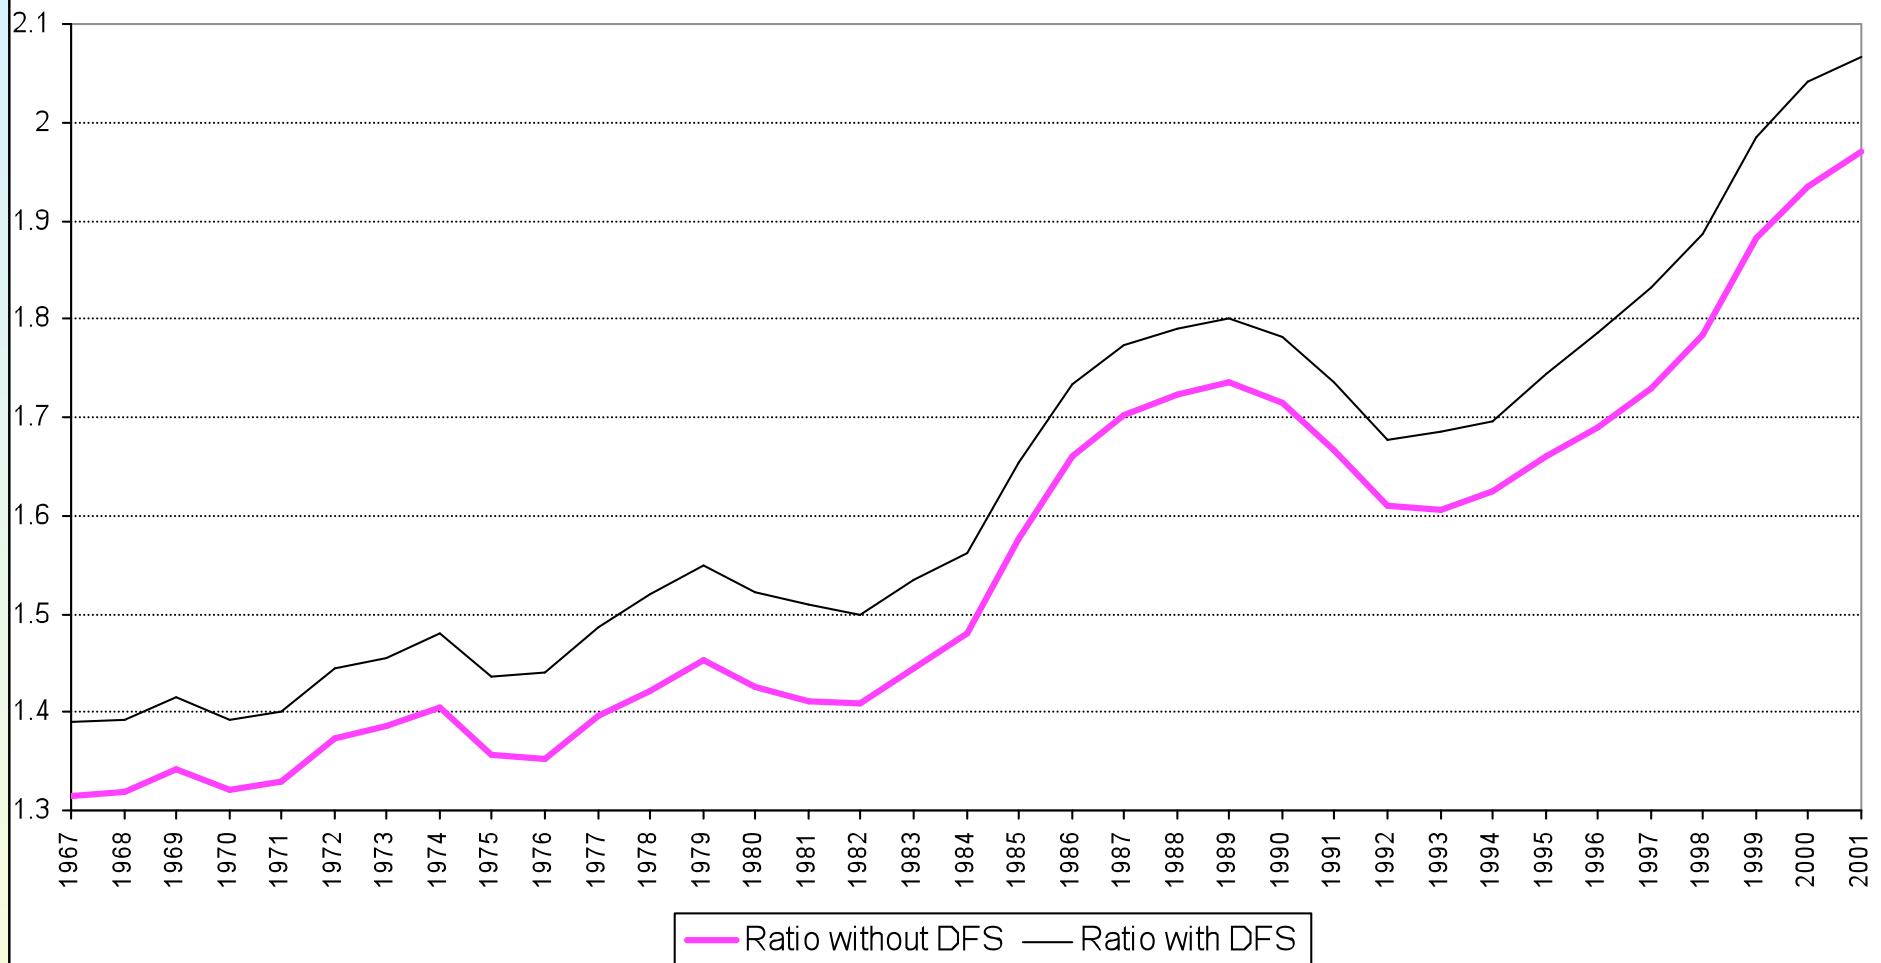

# SUMMARY: Three Sectors

- Nongovt “Inside” net financial wealth created annually = zero
  - Subsequent portfolio adjustments → Prices and returns on stock of financial assets adjust
- Nongovt Net Financial Wealth created annually = Govt Def
  - Subsequent portfolio adjustments → Prices and returns on stock of Treasuries adjust
- ROW Net Financial Wealth created annually = CA Deficit
  - Subsequent portfolio adjustments → prices and returns and exchange rates adjust (floating rate)

**Figure 1: Financial balances of the US (% of GDP)**

**Figure 2: Ratio of Total Private Sector Debt to Disposable Income, 1967-2001**

Sources: Bea, Flow of Funds (<http://www.federalreserve.gov/releases/Z1/Current/z1r-2.pdf>). DFS: Domestic Financial Sector

## GOLDILOCKS AND THE THREE BALANCES

- Easy to show that Goldilocks was driven by unsustainable private sector deficit spending, which resumed in the recovery.

**What drove private deficits?**

**Democratization of credit**

**CRA, redlining, deregulation**

**memories of great depression faded**

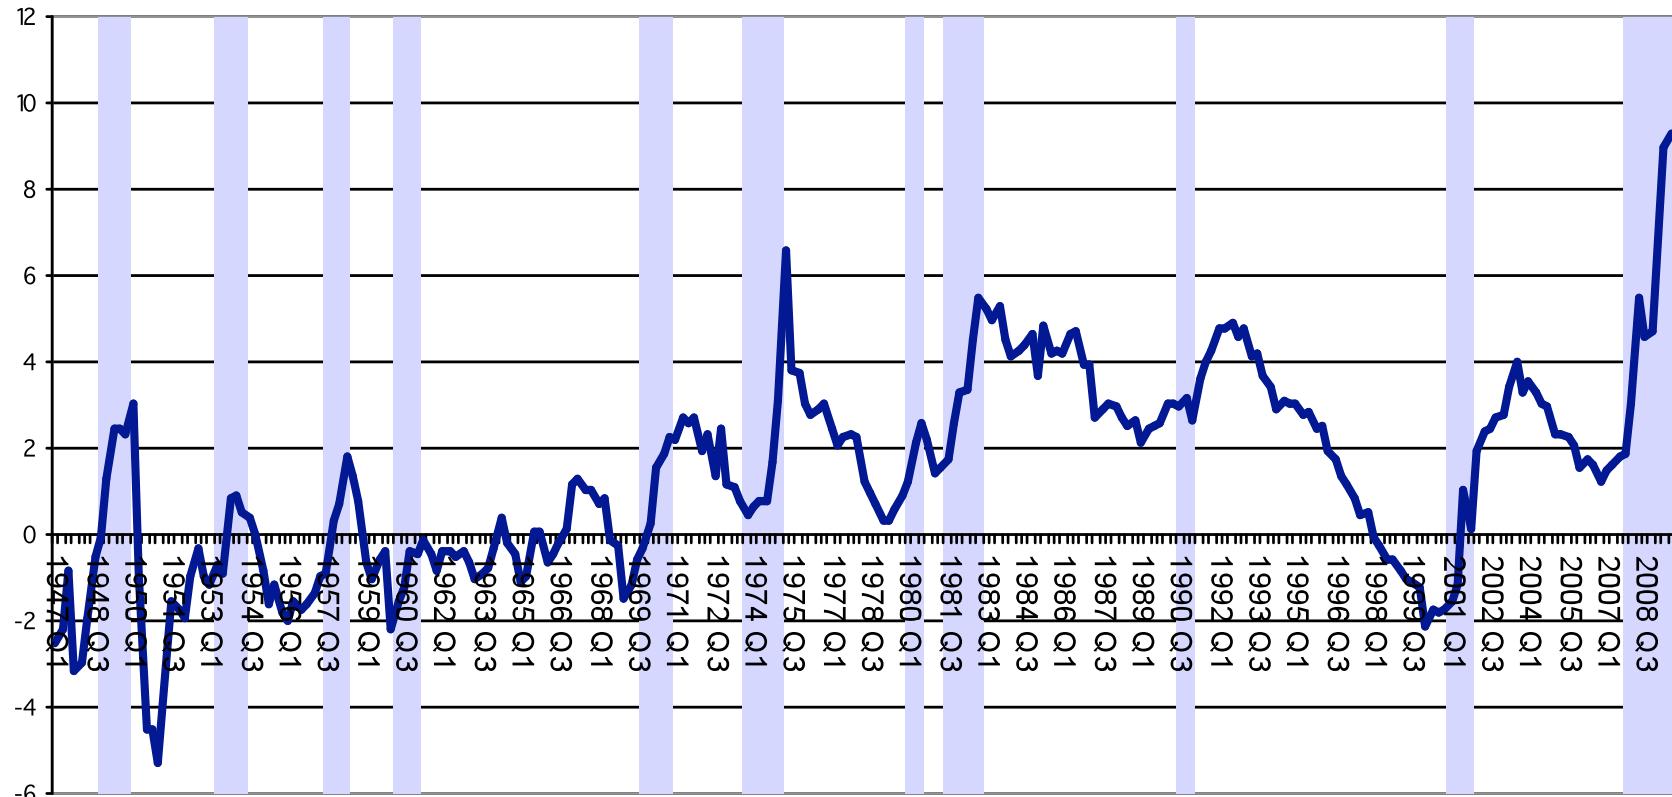

**Stagnant wage income**

- With current acct deficit = 4% of GDP, private sector deficit (5.6%) was sum of the overall budget surplus (1.6%) and the current account deficit:  $5.6\% = 1.6 + 4$

# Clinton Boom Revisited

- Most thought the Clinton budget surplus was a great achievement (and projected the surplus to continue for 15 yrs or more--until all debt retired for first time since 1837).
  - Lockboxes endorsed by Summers&Yellin&Rubin
  - Fed govt debt ratio 6% by 2010!!!
- By identity means a private deficit and loss of wealth
- When firms and households retrenched, economy collapsed and budget deficit restored
- (Those who are ignorant of history are doomed to repeat it: 6 previous sustained budget surpluses, were followed by our 6 depressions! 1819, 1837, 1857, 1873, 1893, 1929)

## Federal Government Deficit/Surplus (% of GDP) and Recessions

Source: Bureau of Economic Analysis and National Bureau of Economic Research

Note: The Sign of the Deficit/Surplus is Reversed

# Reprise: Implications of Noose Tightening (2005)

- In late 1990s, tax revenues grew 10% per year, much faster than G (3%) or real GDP (4%)
  - By 2000, real GDP growth fell to zero, tax revenue began 4-yr fall (Mar 2002 falling by 15% per year)
- Revenues now increasing at 15%—far outstripping growth of G & nominal GDP (less than 7%), and real GDP (3%)
- In the past, growth of taxes at rate far above GDP was followed by recession; current excessive growth of taxes is unprecedented—and projected to continue!

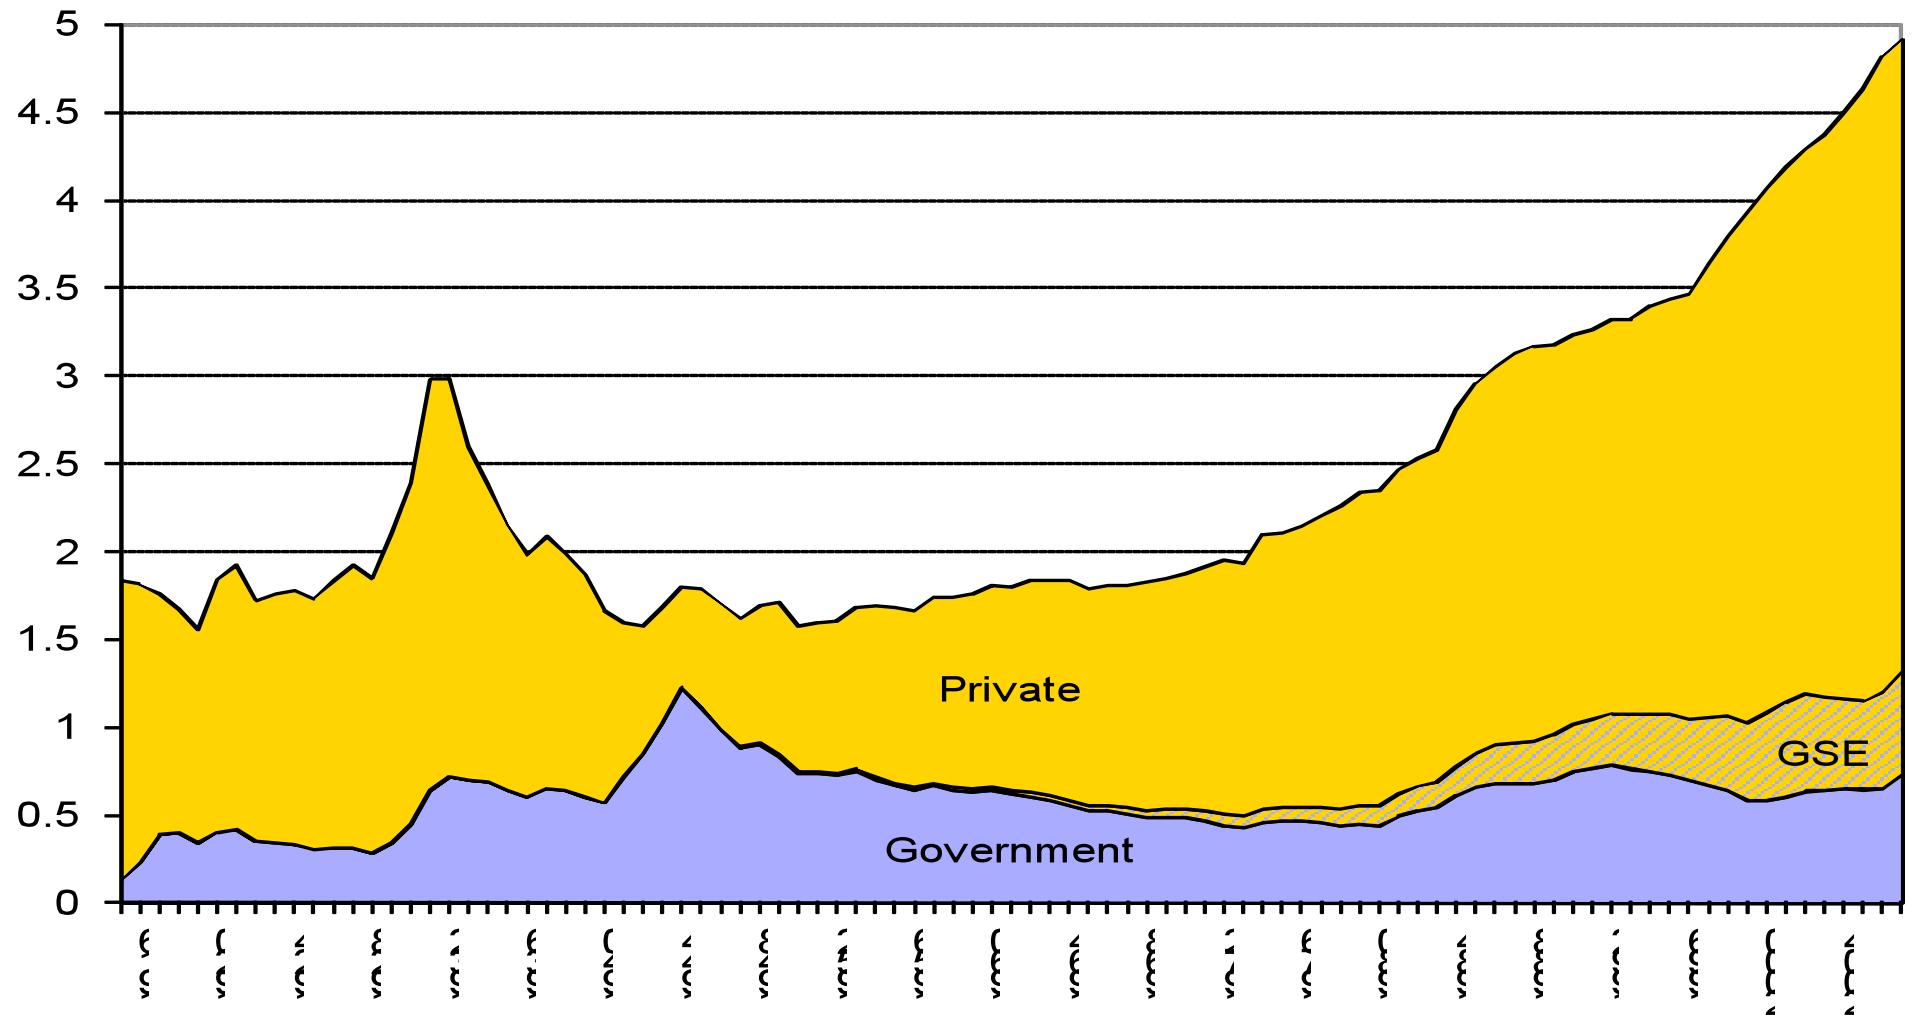

# Dangers Facing US Economy (2005—through spring 2008!)

- First dispense with red herrings:
  - Inflation: commodities prices and white noise; anyway, no evidence low inflation is harmful
  - Infinite horizon “unfunded liabilities”; **actually** gov’t debt represents private wealth
  - “Unsustainable” US current acct deficits that require foreign lending; **actually** US net imports provide desired saving to ROW; any turn-around is far-off, will be slow, and will raise domestic AggD

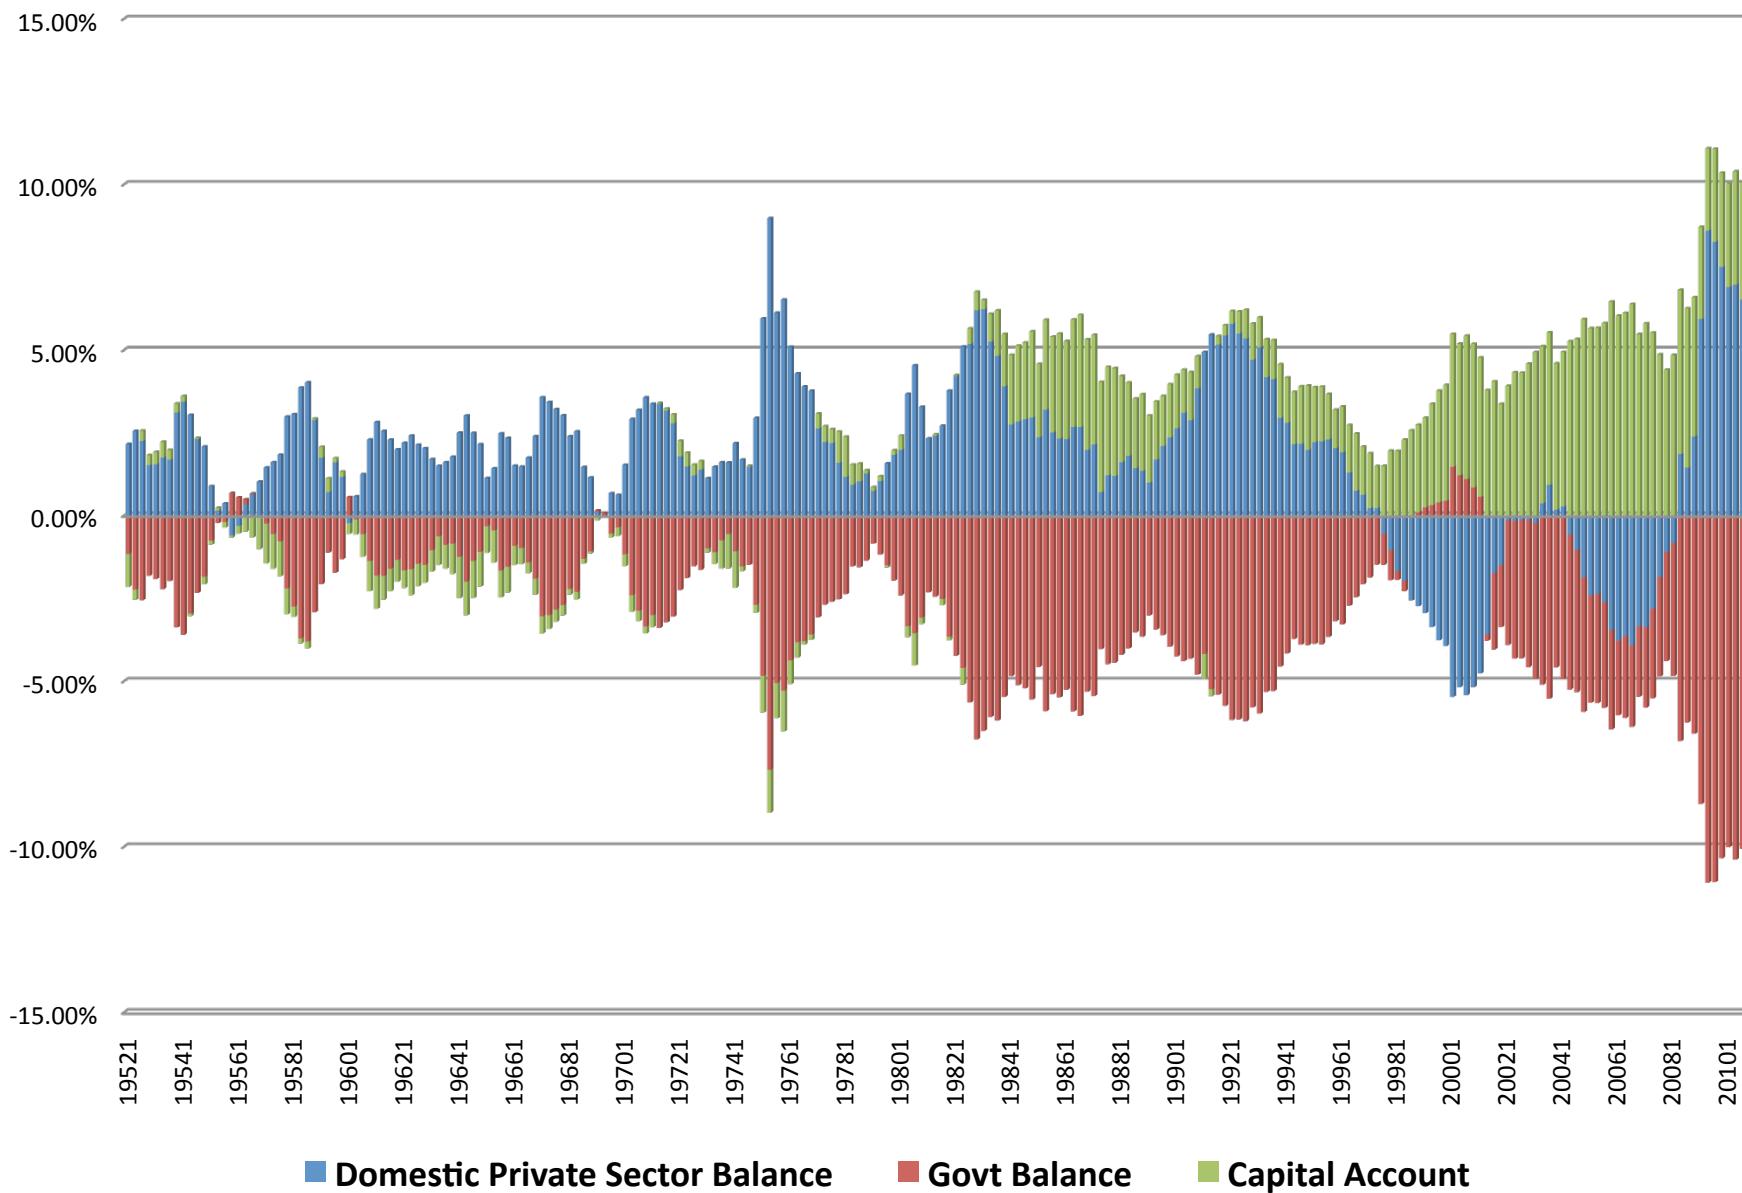

# Real Dangers 2005

- Federal gov't spending not growing
- Overly restrictive tax policies (regressive S&L; taxes on employment; AMT)
- Rapidly rising private debt (equity & real estate booms, commodities boom, few jobs, stagnant real wages)
  - Orthodox: doesn't matter because wealth is rising, too
  - Godley in 2000: if growth of net lending can't last for 8 yrs, "sensational day of reckoning could be at hand"

# Financial Liabilities Relative to GDP

## Sector Financial Balances as a % of GDP, 1952q1 to 2010q3

# Conclusions

- There really is S&L govt fiscal storm; won't be resolved until economy recovers
- Federal deficit nothing to fear; spends by crediting bank accounts. TINA
- Flex exchange rates and current acct def
- Free of financial constraints, can focus on real problems: unemployment, hunger, poverty, homelessness, S&L govt crises, infrastructure, health care, education
- Fear mongering and looming financial crises: the lesson of Japan
